Body Mass Index

*This variable was calculated as follows:*

$$BMI = [(Weight \text{ in Pounds}) / (Height \text{ in inches}) \times (Height \text{ in inches})] \times 703$$

*Any extreme results, i.e., BMI of less than 15.0 or greater than 59.9, were recoded to 99, since in such cases the accuracy of height and/or weight values is highly doubtful.*

*Body mass index (BMI) is a measure of body fat based on height and weight that applies to both adult men and women. BMI categories are:*

Beale-Ross Rural-Urban Continuum Code for Residence at the Time of the TA Interview

*This variable is suppressed (filled with zeroes) in the public release file to protect the anonymity of respondents. The data are available in a separate file to qualified users under special contractual arrangements with the PSID; for more information, contact us at PSIDhelp@umich.edu.*

*These codes are based on matches to the FIPS state and county codes against the 2013 Rural-Urban Continuum Codes published by USDA downloaded from <https://www.ers.usda.gov/data-products/rural-urban-continuum-codes/.aspx>*

*The 2013 Rural-Urban Continuum Codes form a classification scheme that distinguishes metropolitan counties by the population size of their metro area, and nonmetropolitan counties by degree of urbanization and adjacency to a metro area. The official Office of Management and Budget (OMB) metro and nonmetro categories have been subdivided into three metro and six nonmetro categories. Each county in the U.S. is assigned one of the 9 codes. This scheme allows researchers to break county data into finer residential groups, beyond metro and nonmetro, particularly for the analysis of trends in nonmetro areas that are related to population density and metro influence. The Rural-Urban Continuum Codes were originally developed in 1974. They have been updated each decennial since (1983, 1993, 2003, 2013), and slightly revised in 1988. Note that the 2013 Rural-Urban Continuum Codes are not directly comparable with the codes prior to 2000 because of the new methodology used in developing the 2000 metropolitan areas.*
